## MANUAL TRAINING EQUIPMENTS PURCHASED FOR HIGH SCHOOL

E. A. Ross Finds El Paso Equipment and Instruction Equal of Any—The Teachers Are Named and Leaves Granted.

September 12 has been set for the opening of the public schools of El Paso for the term of 1910-11. This was determined at a meeting of the board of trustees held at the Mesa school Monday afternoon. The teachers' institute required by the laws of the state, will be held for five days following Sept. 5. It was decided at the meeting that the Vilas school must be filled, and in order to do that, steps will be taken for the rigid enforcement of the requirement that all parents of that district send their children to the Vilas school. The meeting held Monday afternoon was a regular one. Trustees W. H. Winter, H. A. Carpenter, John H. Harper, W. L. Peabody and E. H. Irvin were present; B. M. Worsham and R. L. Dorband were absent.

Purchasing agent F. E. Sawyer brought to the attention of the board a number of matters of expenditure for consideration and approval. Prof. W. K. Preston, elected head of the science department, notified the board that he was unwilling to work for the salary offered. Vernon S. Rogers was appointed in his stead. E. A. Ross, superintendent of the manual training department, read a report setting forth his findings during a six weeks' visit to various training schools of the United States.

Internal Committee Reports. A communication was read from superintendent N. R. Crozier, in which he stated that it would be impossible for him to attend the meeting of the board on account of illness in his family. W. L. Peabody, for the internal committee, made a report, including requests for a year's leave of absence for Miss Eleanor Noonan, of the Alamo school, and Miss Vivian Groves, of the Lamar school; a statement from Mr. Preston, head of the science department, to the effect that he was unwilling to sign his contract, as the salary offered was insufficient, with the recommendation by the internal committee that Vernon S. Rogers be employed in his stead; a request from the Highland Park and Franklin schools asking that provision be made for a substitute teacher in each of those schools.

The requests of the two teachers for a year's leave of absence were granted; Rogers was appointed as head of the science department; the requests of the teachers of the Franklin and the Highland Park schools that substitutes be provided for them was refused.

The external committee made no report. Bids were read from a number of El Paso firms on 18 cars of coal and 34 cords of wood. By motion, the consideration of these was passed until the next meeting, to be held the latter part of the present week.

Repairs Ordered. Plastering of defective places in the walls of the school buildings was ordered, the same to be done at the rate of \$19 a day, plasterer to furnish material.

At the request of Mr. Ross, of the manual training department, instructions were given for the sharpening of several thousand tools and the putting in of order of twenty-five machines.

Warrants were ordered drawn for the payment of the salary of Mr. Ross. School Expenditures. Then followed the adoption of a report of purchasing agent F. E. Sawyer, which showed the expenditures for the month of July as follows:

The report shows expenses for salaries, supplies, fuel and water, and all other school expenses amounting to \$1,786.51. Officers' salaries and office expenses, \$1,181.27. Furniture, fixtures and equipment, 446.09.

Total expenses, \$3,413.87. Immediately after the acceptance of this report the board adjourned.

Mr. Ross's Report. In his report on his visit to eastern schools, E. A. Ross, superintendent of manual training, said:

The six weeks' leave of absence from which I have just returned was spent in studying the manual training equipments and courses of study in other cities. The progress that has been made during the last two years is surprising, and the important place given to manual training, as well as its remarkable financial support, prove that this department is past the experimental stage, and is an assured and permanent part of the public school curriculum, destined to increase year by year in importance and magnitude.

I heard complaints as to the cost of equipment or maintenance, and some equipments even in small cities were far more elaborate and costly than our own.

The importance given to this work in the high schools is a noticeable fact in nearly every city. Many cities have manual training high schools costing \$300,000 and upwards each, and some cities are equipped with two or more manual training high schools. Seattle has a force of 27 manual training teachers on high school work alone.

The manual training work in the grades below the high school in the El Paso school compares favorably with the work in the grades in any city in the United States. I found courses in none that could be considered superior to ours, and only a few are equal. While our equipment in the grades is neither elaborate nor expensive, it is, for all practical purposes, equal to any, and efficiency is after all the essential consideration. I found nowhere a more efficient manual training teacher than would surpass that of El Paso in points of preparation, faithfulness of purpose and devotion to the cause.

It is gratifying to note that the equipments have been ordered for the high school, bench work and domestic art, as well as for the new shop of the Douglas school. The benches and equipment ordered are durable and practical. The tools benches and vices are the standard throughout the United States. There are on the market a number of cheap benches and vices which are in the end very expensive. We have a few in our present equipment and the expense to keep them in repair, combined with the time wasted, more than balances the difference in first cost.

We have several thousand tools and about 25 machines that need sharpening or putting in order before school opens, and to be kept in order after school begins. There are a number of lockers to be made, and considerable work requiring an expert and dependable mechanic. This position was held last year by Mr. Chadwick, who was laid off in May. A suitable man can be obtained at the regular carpenter's wages. I recommend that such a man be appointed, as he will save to the schools several hundreds of dollars.

Landress Urged. The large number of towels used in the domestic science and domestic art classes makes the laundering of these towels an important item. I believe it would be well to employ a suitable domestic to do this work in the laundry of the Alamo school. It would require only a day or so of work each week and I believe would result in a distinct saving to the schools.

Teachers. Miss Sadie Swenson, who was elected

## Hay's Hair Health

Keeps the Hair from Falling Out

Falling hair is due to lack of nourishment at the hair roots and often to an excess of dandruff on the scalp. Hay's Hair Health Used regularly, invigorates hair roots, cleanses the scalp of dandruff and restores the hair to its natural growth.

I thought of writing you some time ago about the truly remarkable results I have obtained from the use of Hay's Hair Health. I have only words of praise for such a wonderful remedy. My hair began to fall out a very early age. Hay's Hair Health, in a very short time, covered my scalp with a splendid growth of hair.

to a position in the manual training department, did not sign the contract and inform me that she has accepted a position in the College of Industrial Arts at Denton, Texas. I submit for this position the name of Miss Marcia Potter, who has had four years of successful teaching experience, and is a graduate of a teachers high school, a good normal school and Stout institute, one of the best schools in the United States for the equipping of teachers of manual training in all its branches.

I have today received a communication from Mr. Ashton, stating that he cannot return this year. He was instructor of the boys in several schools. It is very difficult and almost impossible to secure good men at this late date. If some means could be devised for the appointment to be made the same day that a suitable man is located it might be the means of sparing us a very embarrassing situation when school opens.

He calculated that it would require three weeks for France as against 11 days for Prussia. The event proved that he was right as to both his own army and that of the enemy. France found it out afterwards; Prussia knew it before.

Long before the war was dreamed of by the public, the general staff had prepared for every possible eventuality. When the war was declared it was necessary only to send telegrams announcing that fact. Instantly every officer in the army, every private in the reserve and the militia, every person in authority, whether over much or little, had only to open an envelope to find the orders which, when obeyed, would make the mobilization of the army complete in the shortest possible time.

The railway agents had only to open envelopes to find what the railways were expected to do, where to have trains, how many men there would be to carry from each station, and every other detail of war transportation. The transportation facilities were not to be changed or lessened, as they were by Russia in its war with Japan, and as they were by the United States in its war with Spain. The disgraceful congestion at Tampa in 1898 would not have been possible in Germany.

Van Roon Not Worried by War. The Prussian minister of war, Von Roon, the day after war was declared with France, went off into the country to take a few days rest, as everything had been prepared and there was nothing left for him to do. He afterwards said that the two weeks following the memorable night of the mobilization were the busiest and the freest from care of his whole military career. The mobilization machine worked with such exemplary exactitude, and so completely without friction, that the war office did not receive one single inquiry from any commanding general or other officer in the army. This was due in spite of the fact that the order for the mobilization was given without any warning, and many of the commanding generals and staff officers were away on vacation. In every instance the man next in command merely opened an envelope and proceeded to obey orders.

If England should declare war against Germany today, the Berlin government would have nothing to do except to notify the country of that fact. There are some thousands of sealed envelopes containing written orders which would take care of the mobilization of the German forces, and which, in all probability, go far enough to provide for the mobilization of a German army ready to sail for England in the event of a British defect at sea. It is certain that embarkation drills have taught the German officers how the trick can be done. It is certain that plans for the invasion of France, Belgium and Holland exist in the office of the German general staff, and the German army would be in readiness to strike the blow before either of the other countries possibly could know anything about it.

Largest Army in World. The active army of the German empire in time of peace has a total strength of 600,000 men, and nearly 30,000 officers. In time of war the mobilized field army, made of the active army and the reserves first called, would have a strength of 1,165,000 men, supported by the organized Landwehr with 600,000, and the Landsturm with 2,000,000 men, making a total strength of almost 4,000,000 soldiers.

Young men are liable for service on reaching the age of 17, although the service is not to call them until they are about 20. Every German capable of bearing arms has to serve in the standing army for six years, or for seven years in the cavalry. Of the six years, two must be spent in active service, three for the cavalry, and the remainder in the active reserve. After quitting the reserve, the conscript goes into the Landwehr for another five years in the first class, during which he receives two trainings of 14 days each; and then he goes to the second class for several years, and then, finally,

into the Landsturm, where he remains until he is 45 years old.

Compulsory Service. About a half million young men reach the age of 20 every year. When these unfit to serve, because of physical or other disabilities, are deducted, about 350,000 are left liable to conscription. Of these, however, on account of the legal limitation of the strength of the active army in time of peace, only a certain number join the army. They are chosen by lot, and the remainder are drafted into the Ersatz reserve, where the period of service is 12 years, and in which the men are liable to three periods of active military drill of ten, six, and four weeks respectively. As a matter of fact, of late years since the population has so greatly increased and the financial burden has been heavier to bear, many young men receive practically no military training at all, although they all are reckoned a part of the Landsturm, or ultimate militia reserve.

over all other armies in the matter of organization is admitted. There are those who believe that the mechanical perfection which has destroyed individualism in the German soldier would place that army at a disadvantage in battle with another army made up of resourceful men, able to rely upon their own initiative. Such theories are comforting to the United States and Great Britain, the only powerful nations which depend upon volunteer enlistment to fill their armies. But it is not pretended, even in England or the United States, that any existing army can compare with the German in the business of preparation for battle, in the business of keeping the soldiers well and healthy, or in its general preparedness to meet with any possible eventuality of war.

The German army is the most highly organized body of men in the world. It has been the inspiration and it has furnished the ideas for political and industrial Germany—more highly organized than anything yet dreamed of by the Anglo-Saxon nation.

Tomorrow—The Imperial Government.
